

Going Green v3.0

Emissions Management made easy

Emissions Management ...

... without a single keystroke required from your operators

Problems Solved's "Going Green" software enables logistics service providers and their customers to undertake proactive, real-time management of their transport-related emissions without adding to the operational workload.

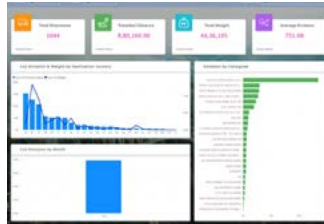

- **Emissions tracking and reporting across all modes and all legs of shipment is easy and without a single keystroke required from your operators.**
- **Emissions compliance for your customers is easy, without a single keystroke from your operators.**
- **You can put your customers at the leading edge of emissions management with active, real-time KPI-based management – without a single keystroke needed from your operators.**
- **You can have emissions charging as a line item in your customer invoicing – without a single keystroke needed from your operators.**
- **Your customer quotes can include not just cost and time, but emissions factors too – without a single keystroke needed from your operators.**

Going Green v3.0 enables management against SMART emissions reduction targets, and equips operational staff with the tools and information to make intelligent decisions based on environmental impact.

Real-time Emissions Management Dashboard

Going Green v3.0 addresses the shortcomings of other green logistics products, enabling service providers and their customers to undertake proactive, real-time management of their transport-related emissions rather than simply monitoring what has already happened.

- **Real-time monitoring of performance**
- **Interactive interface, allowing easy deep dive analysis/drilling down**
- **Customer access to set their own KPI's on the dashboard**
- **Tracking of emissions trends**
- **Enables “what if” modelling to support strategic decision-making on sourcing and routing taking into account environmental impact**
- **Statutory emissions reporting information at the touch of a button**

About Us

Problems Solved helps logistics and transport companies compete in the digital world. As a “business first” consultancy, our advice and technical implementation is entirely focussed on ensuring that our clients get a return on their investment in software and process improvements.

Our consultants are all seasoned logistics professionals with a wide range of experience, enabling us to support companies across the supply chain, including forwarders, warehouse operators, trucking companies, cargo owners and ports all around the world.

**PROBLEMS
SOLVED**
